Press Release

KML Vision GmbH Transitions to KOLAIDO GmbH: A New Chapter in Advancing Global Health

Altenrhein, August 2024 – KML Vision GmbH, an innovative Austrian software company in life science advancements, has announced that it will be concluding its operations. However, this marks the beginning of an exciting new phase as the company KOLAIDO GmbH has been established as a new legal entity based in Switzerland, dedicated to carrying forward the vision of positively impacting global health and enhancing the quality of life.

KOLAIDO GmbH is committed to advancing the frontiers of life sciences by empowering researchers with cutting-edge tools and insights. The company's mission is to foster scientific discoveries that translate into real-world health benefits, ultimately improving lives on a global scale. By combining technological innovation with deep industry expertise, KOLAIDO aims to bridge the gap between research and application, ensuring that scientific advancements lead to tangible outcomes in biology and medicine.

"Our mission has always been to harness the power of science and technology to make a meaningful difference in the world. With KOLAIDO, we are entering a new era, one where we are better equipped than ever to support the incredible work of researchers and to push the boundaries of what is possible in life sciences," said Dr. Philipp Kainz, CEO and co-founder of KOLAIDO. "I am truly excited about the future and confident that, together, we will continue to make significant strides in improving global health."

Co-founders Wolfgang Frohner, CFO, and Ralf Thür, board member, expressed their collective enthusiasm for the future: "We are united in our belief that KOLAIDO is poised to achieve remarkable progress in life sciences. Our shared vision is to not only continue the legacy of KML Vision but to elevate it to new heights. We are fully committed to supporting the company as it embarks on this next chapter, pushing forward with a unified purpose to advance life science research. By pooling our expertise, resources, and passion, we are confident that KOLAIDO will thrive and make a lasting impact in this industry."

The newly formed entity has fortified its management team, now bringing together over 40 years of combined experience in successful and sustainable business operations. This strategic leadership will guide KOLAIDO in its quest to drive meaningful progress, ensuring that the company remains at the forefront of innovation while adhering to principles of ethical and responsible research.

A significant aspect of this transition is the secure transfer of the IKOSA image analysis platform to KOLAIDO. This platform, known for its excellence and innovation in the analysis of biological images, will continue to operate seamlessly under the new entity, enabling researchers to pursue groundbreaking work without interruption.

In alignment with its renewed mission, KOLAIDO will be updating its corporate identity to reflect its new chapter. This includes the introduction of a new logo, domains, email addresses, website, social media, and communication materials, all designed to present a unified and forward-looking brand.

About KOLAIDO

KOLAIDO develops, sells and operates award-winning microscopy image analysis solutions for the needs of life science research. Powered by the latest Artificial Intelligence technology, their flagship software product, the IKOSA Platform, empowers customers to create their own unique bioimage analysis applications without requiring writing any software code. IKOSA solutions deliver quick, reliable, and reproducible insights into complex life science questions, while supporting more efficiency, flexibility, and precision in research.
